PROJECT EXPERIENCE

1. Educational Information Website

This is my first real-world project , Educational information website for training center . This is dynamic website including both admin panel and user interface . I was responsible for admin panel , built with php laravel framework for back-end and using bootstrap , jquery and ajax for front-end.

2. Job Seeker

This is my practice website for job seekers .This is dynamic website including both admin panel and user interface .It also includes real-time notifications and verification mail sending features,built with php laravel framework for backend and using bootstrap , jquery and ajax for frontend.

3. E-shop

This is sample small e-shop website, for buying or booking services. It can be modified into any e-commerce or shop websites updating some features or making a little bit changes in interface.
